

## ABSTRACT

The invention relates to a machine tool or production machine in which the tool/machine has a display unit (4, 5) for visually displaying operating sequences and/or parameters of the tool/machine, whereby the display unit (4, 5) is provided in the form of a projection display (4). Compared to prior art display units or control panels, the inventive display unit provides a user of a machine tool or production machine with an improved ability to view and input information.
